EQUINE ASSISTED THERAPY COURSE OFFERS RESEARCH OPPORTUNITIES TO GRADUATE STUDENTS

ADS 3233 Equine Assisted Therapy (EAT) is a course offered both in the fall and spring semesters by the Animal & Dairy Sciences Department (ADS). A part of the course has the students assist with the therapeutic riding program coordinated through the MSU 4-H Extension Programs at the Elizabeth A. Howard Riding Arena in West Point, Mississippi. Students work with a variety of disabilities, both youths and adults, as they interact and ride horses. While the course is taught at the undergraduate level, graduate students have the chance to assist with the course and the therapy activities, which allows them an opportunity to also conduct research in EAT. Two of these graduate students, Holly Evans, an ADS MS student, and Katie Cagle-Holtcamp, an Animal Physiology PhD student, presented last month their EAT research at the Mississippi Academy of Sciences 2nd Annual Summer Student Science Symposium and plan to present this same research at the 2018 Professional Association of Therapeutic Horsemanship International Conference this October. Further EAT research and greater student participation will be possible this fall semester with the addition of another laboratory section to the ADS 3233 course and a recent grant awarded to course instructor Dr. Molly Nicodemus by the Schillig Special Teaching Projects Program. Individuals interested in the course or the associated EAT research can contact Dr. Nicodemus at mnicodemus@ads.msstate.edu.
